Pickle Labs

We tell you the truth about your AI before you ship it.

Business profile and service guide

1. Who we are

Pickle Labs is a three-person AI consultancy run out of a converted garage in Beirut, Lebanon. Founded in 2026, we build LLM features and AI agents for small and mid-size companies, and we audit the ones that stopped working. We are remote-first and work with clients in Lebanon, the Gulf and Europe. Since launching in early 2026 we have already shipped more than 15 projects.

Mission. Make AI systems that do what they claim to do. Most failed AI projects do not fail because the model is weak. They fail because nobody measured what the system actually does. We measure it, we show you the numbers, and then we fix it.

Unique value proposition. We tell you the truth about your AI before you ship it. Every engagement ends with evidence: traces, test results and a plain-language verdict, not a slide deck of promises.

2. Services

- **Agent Autopsy:** a one-week audit of a chatbot, agent or LLM feature that is not working. Duration: 5 business days. Price: 4,500 USD flat.
- **Build Sprint:** we design and build one agent or LLM feature, with evaluations and a handoff. Duration: 4 weeks. Price: from 18,000 USD, with the scope and final price fixed after scoping.
- **Retainer, Pickle Jar:** 20 engineering hours per month, on call for fixes and improvements. Monthly, with a 3-month minimum. Price: 3,200 USD per month.
- **Retainer, Big Jar:** 50 engineering hours per month, on the same terms. Price: 7,000 USD per month.
- **Prompt Clinic:** a live remote session where we repair your prompts and tool definitions with your team. Duration: 2 hours, up to 4 people. Price: 600 USD per session.

2.1 Agent Autopsy

Price: 4,500 USD flat, delivered in 5 business days. You give us read access to your logs or traces. We review up to 200 real conversations, the system prompt, the tool definitions and the retrieval setup. You receive a failure taxonomy (what breaks and how often), a ranked fix list, and a 60-minute readout call. If the autopsy finds nothing actionable, we refund the fee in full.

2.2 Build Sprint

Price: from 18,000 USD, with the final price fixed after scoping. A Build Sprint starts with a free 30-minute scoping call, after which we confirm the scope and the final price. During the

four weeks we build one agent or LLM feature, an evaluation suite that you keep, and a deployment handoff document. Two weeks of bug fixes after launch are included. The client owns all code and prompts we deliver.

2.3 Retainers

Pickle Jar (20 hours) costs 3,200 USD per month and Big Jar (50 hours) costs 7,000 USD per month. Both cover fixes, new tools, prompt tuning and evaluation upkeep. Unused hours expire at the end of the month and do not roll over. Both tiers have a three-month minimum.

2.4 Prompt Clinic

Price: 600 USD per session. Bring your worst prompts. In two hours we rewrite them with your team, explain why each change works, and leave you with a checklist. The clinic is remote and limited to four participants per session.

3. Team

Omar Al Itani, founder and CEO. Omar leads Pickle Labs, designs the agent architectures and has strong opinions about prompts. Our AI front desk, Dr. Rick, answers the first questions before a human takes over.

Ali, infrastructure and deployment engineer. Former platform engineer at a fintech company. Ali ships agents behind real uptime targets and owns monitoring, cost controls and rollouts.

Youssef, evaluations and observability lead. Youssef builds the test suites and tracing that catch hallucinations and tool misuse before a client's customers do.

4. How we work

- **Scoping call.** Free, 30 minutes, with Omar or Ali. This is the first step for every project.
- **Start date.** New projects typically start within two weeks of a signed agreement.
- **Tools and stack.** We work with OpenAI, Anthropic and Google models and with open-weight models. We build with the OpenAI Agents SDK, LangGraph or plain Python, and we use MCP servers when tools need to be shared across agents.
- **Languages.** We work in English, Arabic and French.
- **Evidence first.** Every deliverable includes traces and measured results.

5. Policies

- **Payment.** 50 percent upfront and 50 percent on delivery, invoiced in US dollars with net-15 terms.
- **Confidentiality.** A mutual NDA is signed before any data is shared. We never train on client data.
- **Ownership.** The client owns all code, prompts and evaluation suites delivered.
- **Accuracy.** We do not guarantee that a system will be 100 percent accurate. We measure accuracy, report it honestly and improve it.
- **Refunds.** Agent Autopsy is fully refundable if it finds nothing actionable. Other services are billed as agreed in the scope document.

- **Support hours.** Monday to Friday, 9:00 to 18:00 Beirut time. We reply within one business day.

6. Frequently asked questions

Do you work with early-stage startups? Yes. Most of our clients have fewer than 200 employees.

Can you build a customer-support chatbot? Yes. It is one of our most common Build Sprints.

Can you take over an agent another team built? Yes. Start with an Agent Autopsy so we know what we are inheriting.

Do you build mobile apps, websites or hardware? No. We build the AI layer: agents, LLM features, tools and evaluations.

Can you generate images or video for us? No. We focus on text and tool-using agents.

How do I get started? Leave your name, email and a line about what you need, and Omar or Ali will arrange the free scoping call.
